

TORQUE CHUCK CHARACTERISTICS

- Can be Taylor made to your particular requirements, from 4" to 16".
- The concentric expansion of the lugs centres the reels, eliminating vibrations and balancing.
- The lugs expansion is done by means of the torsion of the reel, so there is no axial force needed to activate it. You can use it for winding or unwinding applications.
- The big contact surface of the lugs do not damages the internal part of the core, so you can reuse the reels as many times as you need.
- Flanges can be adapted to any roll-stand.
